Resolution: Solved Issue	FAQ Links:
Description	
Supportanfrage	
the high CPU load can be observed if ADF is used with a FEP launcher. The issue is known by FEP and was fixed with at least fep_sdk_participant/3.0.1.2@fep/beta. Is there already an ADF version, that includes this version at least? When is it planned to release ADF with the fix if not done already?	
Lösung	
I think you missed ADF/3.14.0-rc1@dw/preview, which uses fep_sdk_participant/3.0.1.3@fep/beta. We recommend updating to this version, ADF/fep_beta_6@dw/preview is very old... Please keep in mind that ADF and FEP are migrating the platforms (VS2019 and gcc7), which are the profiles of these packages. For more information please have a look here -> ADF 3.14.0 RC1 (Preview) is now available

Hi Florian,

Ah thanks, I did not know that and I will try the new version with the new profiles. The installation for the new profile [U1804_x64_gcc7](#) works.

A follow up question: If I try to install adtf_devicetb_sdk/3.8.0-rc1@dw/preview or adtf_display_toolbox/3.7.0-rc1@dw/preview it fails for the profile [U1804_x64_gcc7](#). Are they already supported by the new profiles?

Thanks!

Hi Micha,

sounds good !

There are already some findings with this preview so we are currently fixing some issues.

After we can provide some toolboxes as well, currently they are only available for older profiles.

Except: We change the Device TB SDK to a header only delivery, you can already use adtf_devicetb_sdk/header_only_package@dw/preview. For Device TB itself I recommend the the latest preview -> adtf_device_toolbox/3.8.0-rc1@dw/preview with -pr U1604_x64_gcc54
