Description

Supportanfrage

I tried to get ADTF3.9.1 running under Ubuntu 20.04, but unfortunately I failed. I know, that you recommend Ubuntu 16.04 - but unfortunately we have to use the newest Ubuntu version due to get the newest deep learning stuff running. Do you know, when there will be a version for Ubuntu 20.04.?

Anyway, maybe the error is not connected to Ubuntu 20.04:

The configuration editor starts as expected and I tried the example as stated in the documentation. The 'Demo Playback Session' could be loaded but if I launch the ADTF Control it does not start and just said that it failed. On the console I got the message (at start up):

QML debugging is enabled. Only use this in a safe environment.
"Failed to extract system scaling from OS 'ubuntu 20.04', using fallback setting '1.0'"

Any ideas, comments?

Do I have to install the toolboxes to get the demos running?

Lösung

The launch options are using xterm on linux, which was missing.

Hello Thorsten,

it should work on Ubuntu 20.04 as well.

So if I get you right:

- 1) Execute Configuration Editor -> works
- 2) Open example project -> works
- 3) Launch Playback Session using ADTF Control -> not working ?

First thing which comes to my mind, the custom launch options from Configuration Editor requires xterm on Linux. Have you installed this package ?

Many thanks,

that solved the problem. I missed the xterm.

Thorsten
