Department:	AEV	Affected Products: ADTF 2.13.3
Requester's Priority:	Normal	Platform: Windows 7 64bit
Support Level:	2nd Level	Topic: ADTF::Recorder
Resolution:	Solved Issue	FAQ Links:

Description

Supportanfrage

Wie in einem früheren Ticket bereits besprochen starte ich ein Recording mit folgendem Snippet:

```
//this example is for using within a filter
tADTFMediaDescriptor sDesc;
strcpy(sDesc.strFilename, "/data/files/newfile.dat");
strcpy(sDesc.strShortDesc, "short description");
strcpy(sDesc.strLongDesc, "long description");
tEventInfo sEventInfo;
memset(&sEventInfo, 0, sizeof(tEventInfo));
sEventInfo.pSource = static_cast<IObject*> (static_cast<IFilter*> (this));
sEventInfo.i32EventClass = adtf::IEvent::CLASS_APPLICATION;
sEventInfo.i32EventCode = adtf::IEvent::EC_StartRecording;
sEventInfo.i32Param1 = 0;
sEventInfo.i32Param2 = 0; //RecorderEventID -> the recorder id which is set in the recorder filter
sEventInfo.pvData = (tVoid*)&sDesc;
sEventInfo.szDataLength = sizeof(sDesc);
_kernel->SignalSend(&sEventInfo);
```

Gibt es die Möglichkeit den Dateinamen des Dat-Files **erst** bei einem Stop/Split Event zu setzen oder muss ich hier mit Boardmitteln die Datei manuell umbenennen?

Lösung

Siehe [Harddisk Recorder - Events received and emitted](#), ganz unten **Change filename of the recorded file**
