<b>Description</b>			
<b>Supportanfrage</b>			
Franz muss in seinem Filter mehrere Pins anlegen. Dabei holt er sich die Description für den Pin vom adtf_media_description Service:			
<pre>adtf::ucom::object_ptr&lt;adtf::streaming::IStreamType&gt; pType; adtf::mediadescription::create_adtf_default_stream_type_from_service(static_cast&lt;adtf_util::cString&gt;("TL_tTrajectoryRel"), pType); trajectory_reader = CreateInputPin("TrajectoryRel", pType);</pre>			
Seine Frage/Idee: Geht das nicht auch als Einzeiler:			
<pre>trajectory_reader = CreateInputPin("TrajectoryRel", "TL_tTrajectoryRel");</pre>			
<b>Lösung</b>			
ACORE-10257 angelegt

Ja das wäre cool, eine angepasste create\_adtf\_default\_stream\_type\_from\_service (die einen richtigen Returnwert hat) würde auch schon viel bringen:

```
auto pReader = CreateInputPin("name", adtf::mediadescription::stream_type_from_service("name"));
```

Dann haben nicht alle Filter eine Abhängigkeit zum MD Service. Könnte Franz damit leben?
